

WEBSITE WEBPAGES

ID NUMBER : N190727

NAME : K. Lavanya

SECTION : CSE-01

ROLL NO : 36

PROJECT : TRAVELLING WEBPAGE

About :

This travelling website is about what are the famous places in Andhra Pradesh. To know about this website one should register in my website. For that I maintain a database so that only valid users can visit my website.

We may have some queries about our destination place. For that I create a page where my users can post their queries like user interface. They can modify their post and they can delete their post with only valid user credentials.

The Technologies I used in the website:

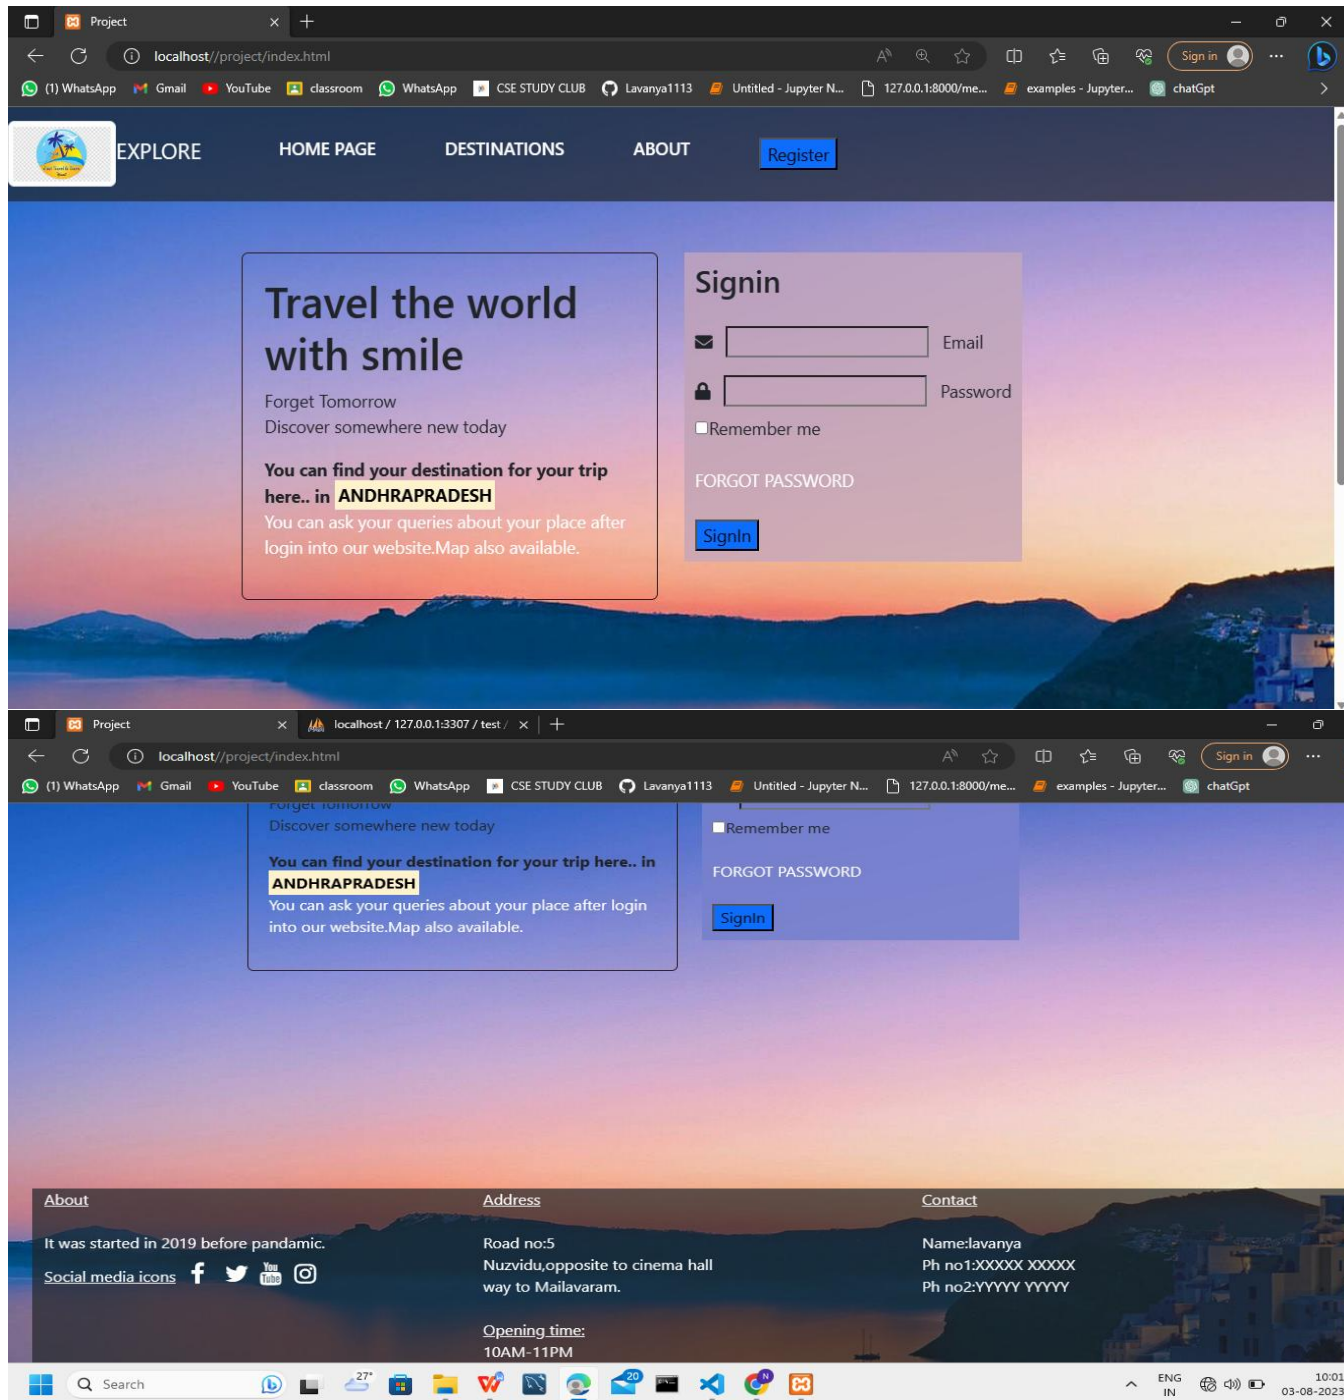

1. HTML
2. CSS
 - . Inline
 - . Internal
 - . External

3. Javascript

4. GitHub

5. PHP

Index.html

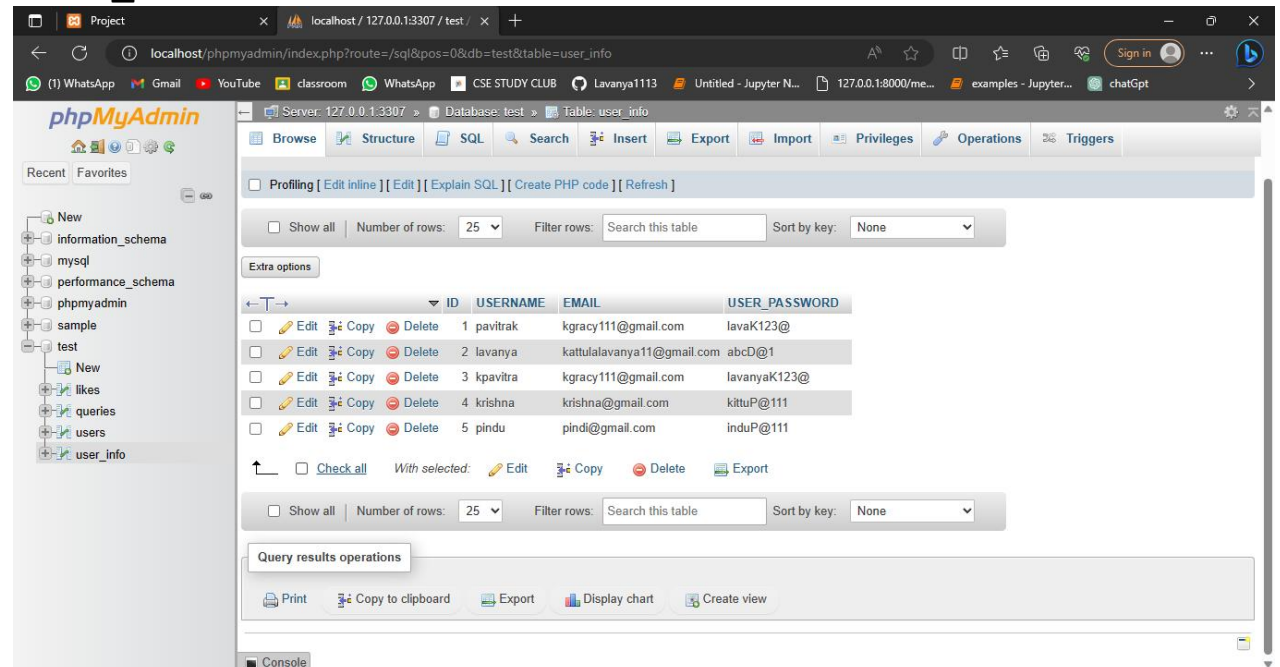

---> only the users in my data base can login into website.

---> Registered users can login with valid credentials.

-->If the user want to register . Then by clicking Register button he/ she redirected to the registration site.

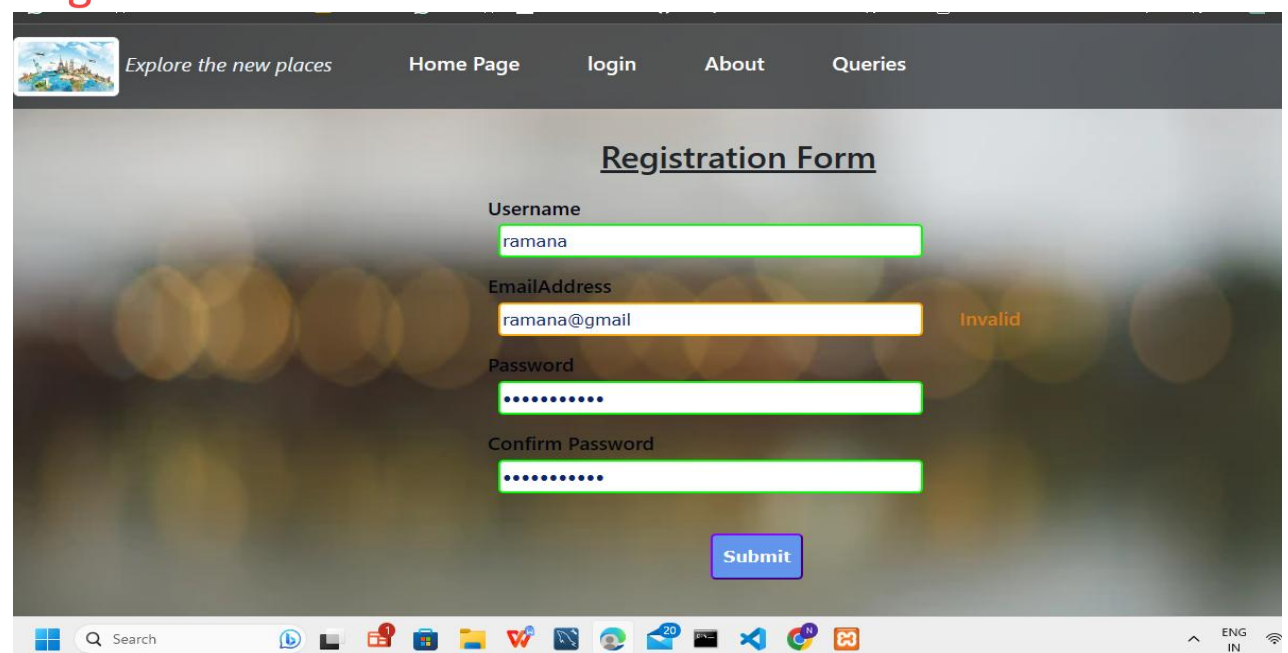

USER_INFO TABLE :

The screenshot shows the phpMyAdmin interface for a database named 'test'. The 'user_info' table is selected, and its structure and data are displayed. The table has four columns: ID, USERNAME, EMAIL, and USER_PASSWORD. The data is as follows:

ID	USERNAME	EMAIL	USER_PASSWORD
1	pavitrak	kgracy111@gmail.com	lavaK123@
2	lavanya	kattulalavanya11@gmail.com	abcD@1
3	kpavitra	kgracy111@gmail.com	lavanyaK123@
4	krishna	krishna@gmail.com	kittuP@111
5	pindu	plndi@gmail.com	induP@111

Registration.html

The screenshot shows a web application with a navigation bar containing links: Home Page, login, About, and Queries. The main content area is titled 'Registration Form' and contains the following fields:

- Username: ramana
- EmailAddress: ramana@gmail (Invalid)
- Password:
- Confirm Password:

A blue 'Submit' button is located at the bottom of the form.

JAVASCRIPT FORM VALIDATION

Forms localhost / 127.0.0.1:3307 / test / X +

Registration Form

Username
ramana

EmailAddress
ramana@gmail.com

Password
.....

Confirm Password
.....

Submit

After submit the form the user data stored in database and redirected to destination page.

users	user_info
-------	-----------

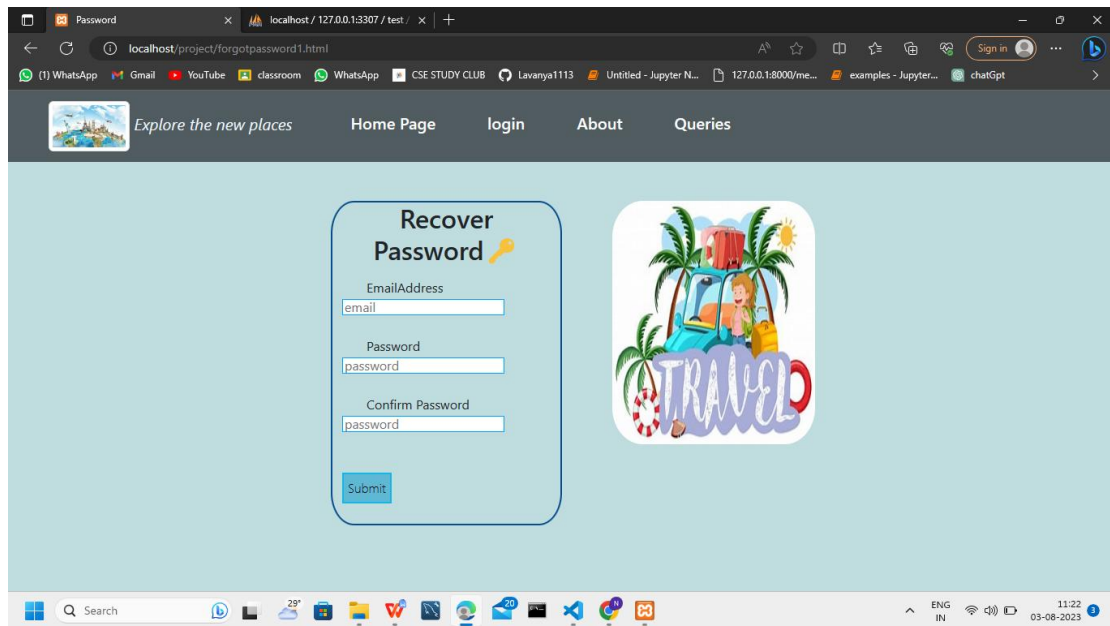

<input type="checkbox"/>	Edit	Copy	Delete	4	krishna	krishna@gmail.com	kittuP@111
<input type="checkbox"/>	Edit	Copy	Delete	5	pindu	pindi@gmail.com	induP@111
<input type="checkbox"/>	Edit	Copy	Delete	6	ramana	ramana@gmail.com	ramanaK123@

-->added

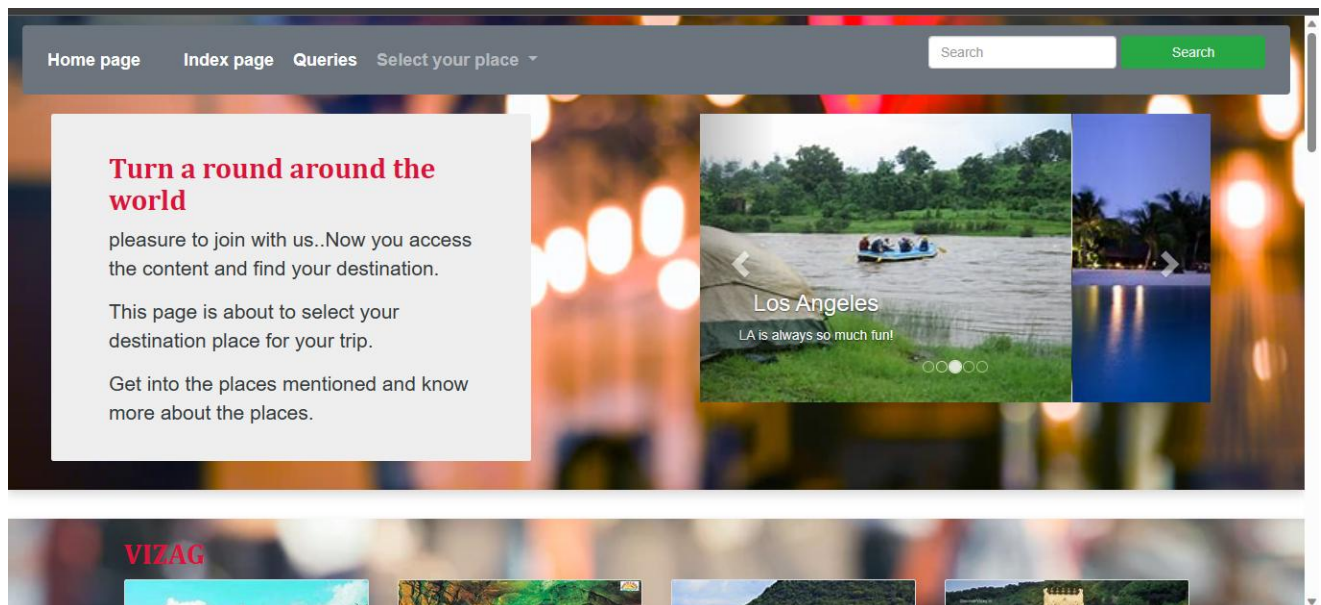

FORGOTPASSWORD.HTML

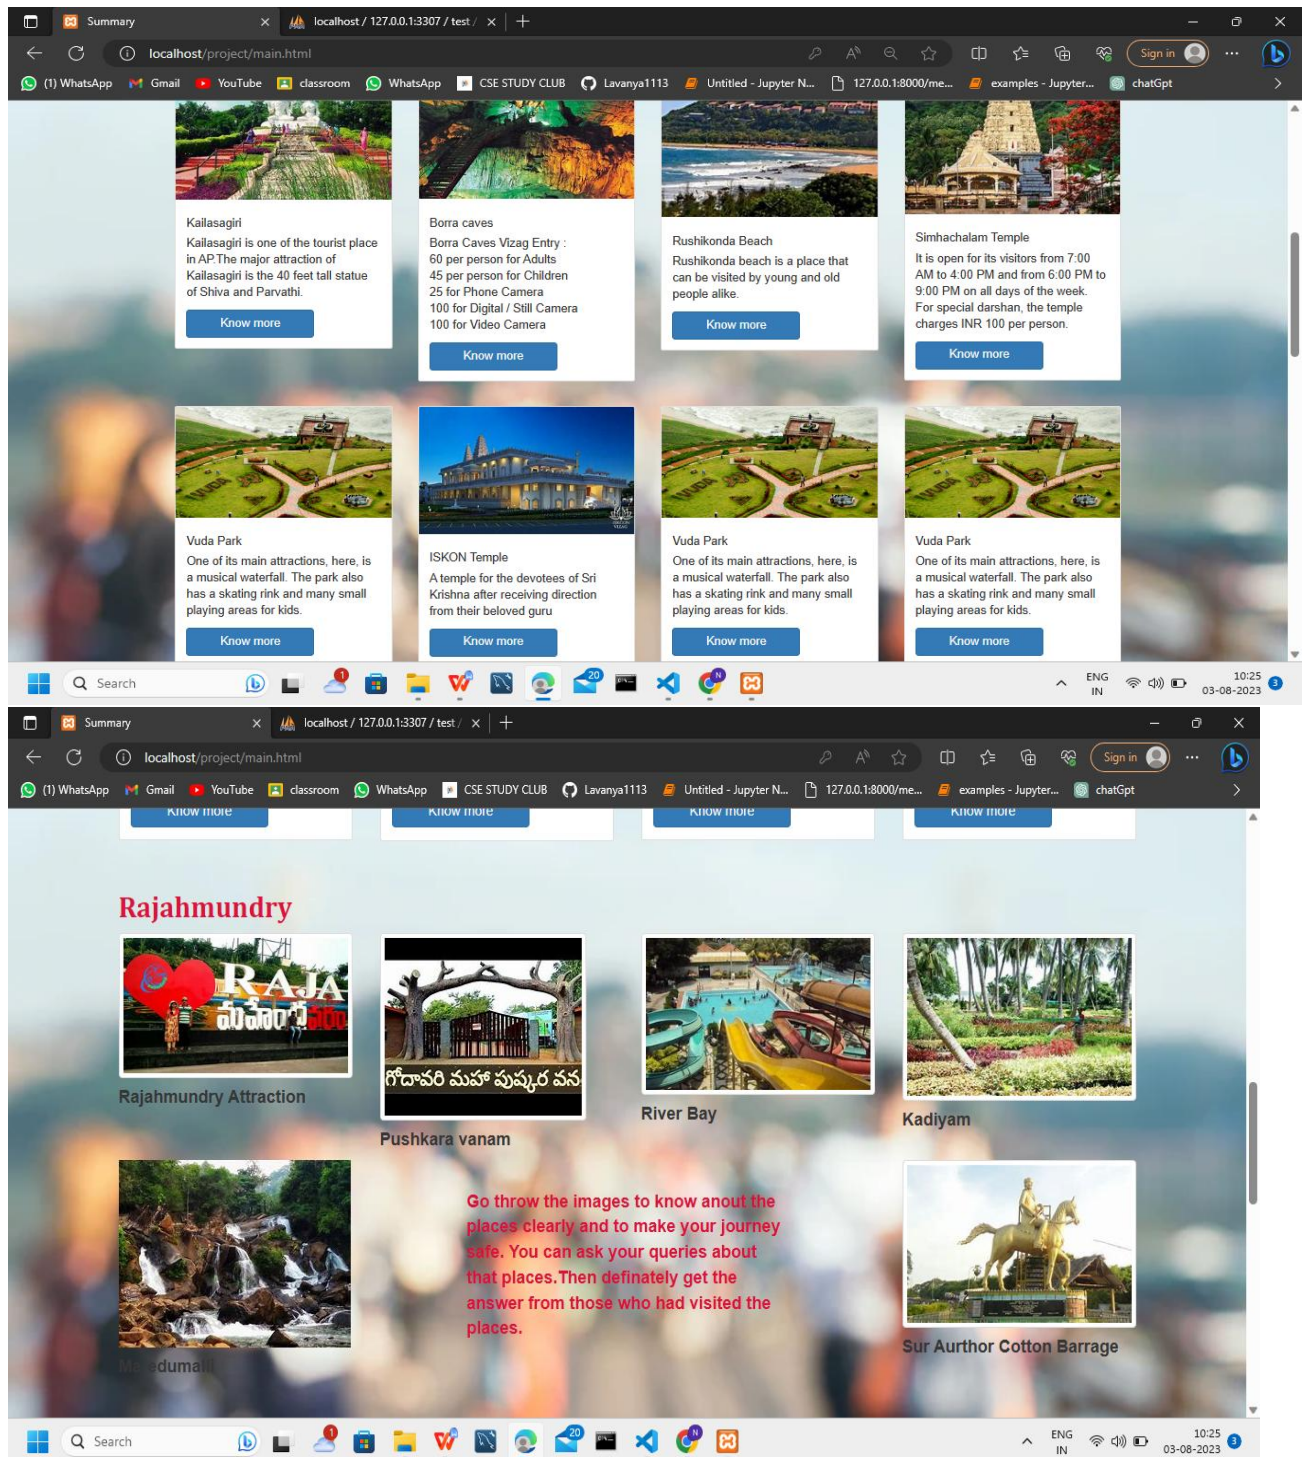

-->if provided email stored in the database.

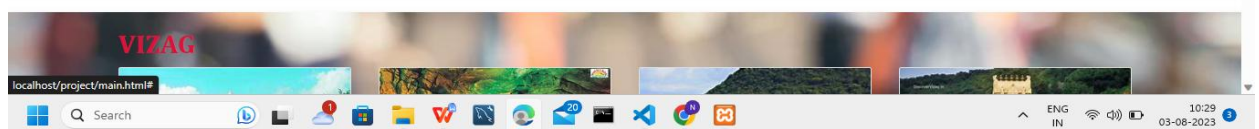

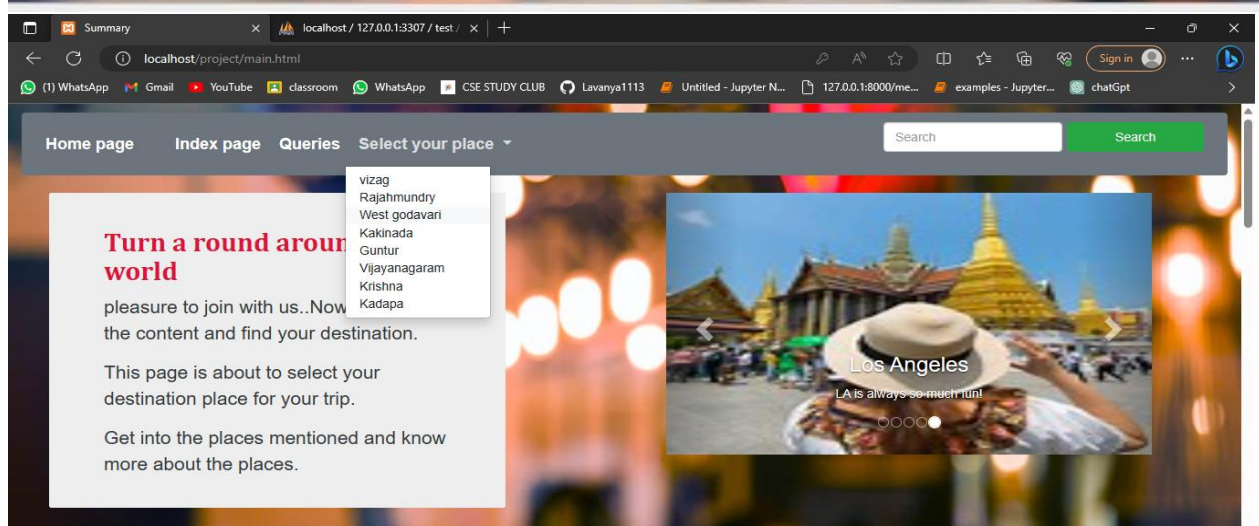

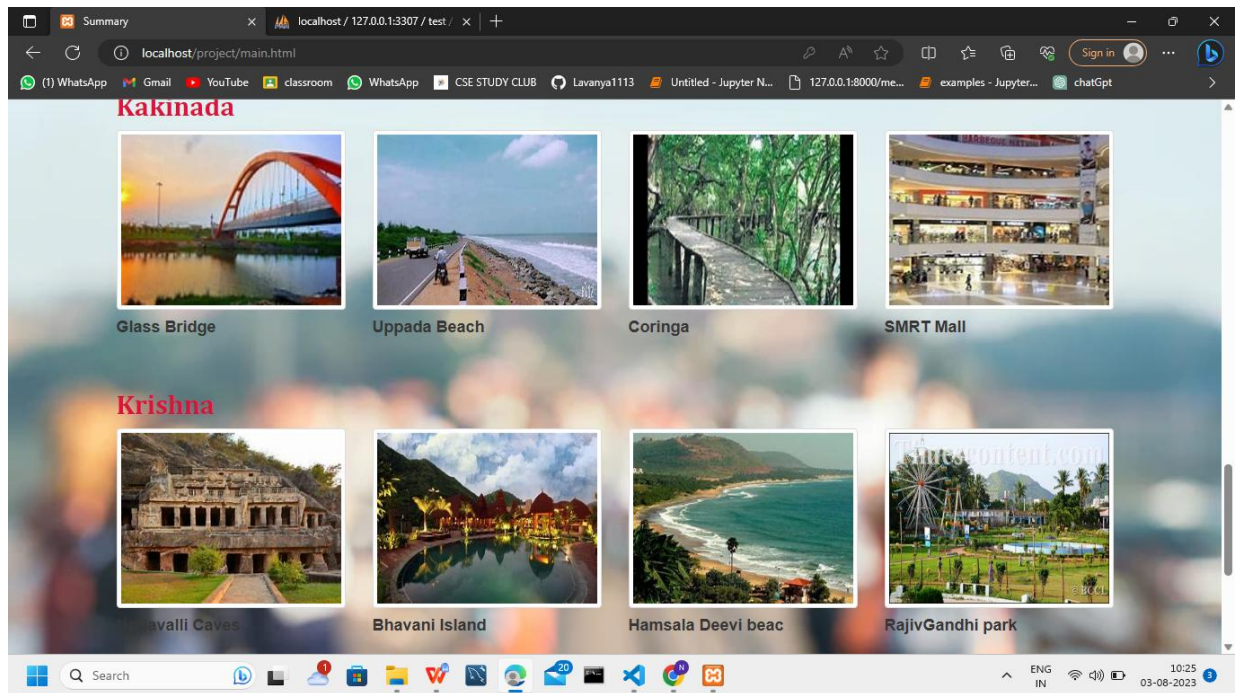

-->Then they can create another password for their email.

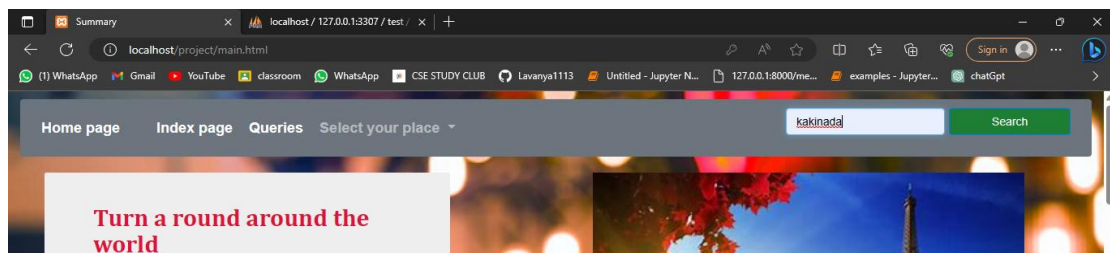

Main.html Destination page

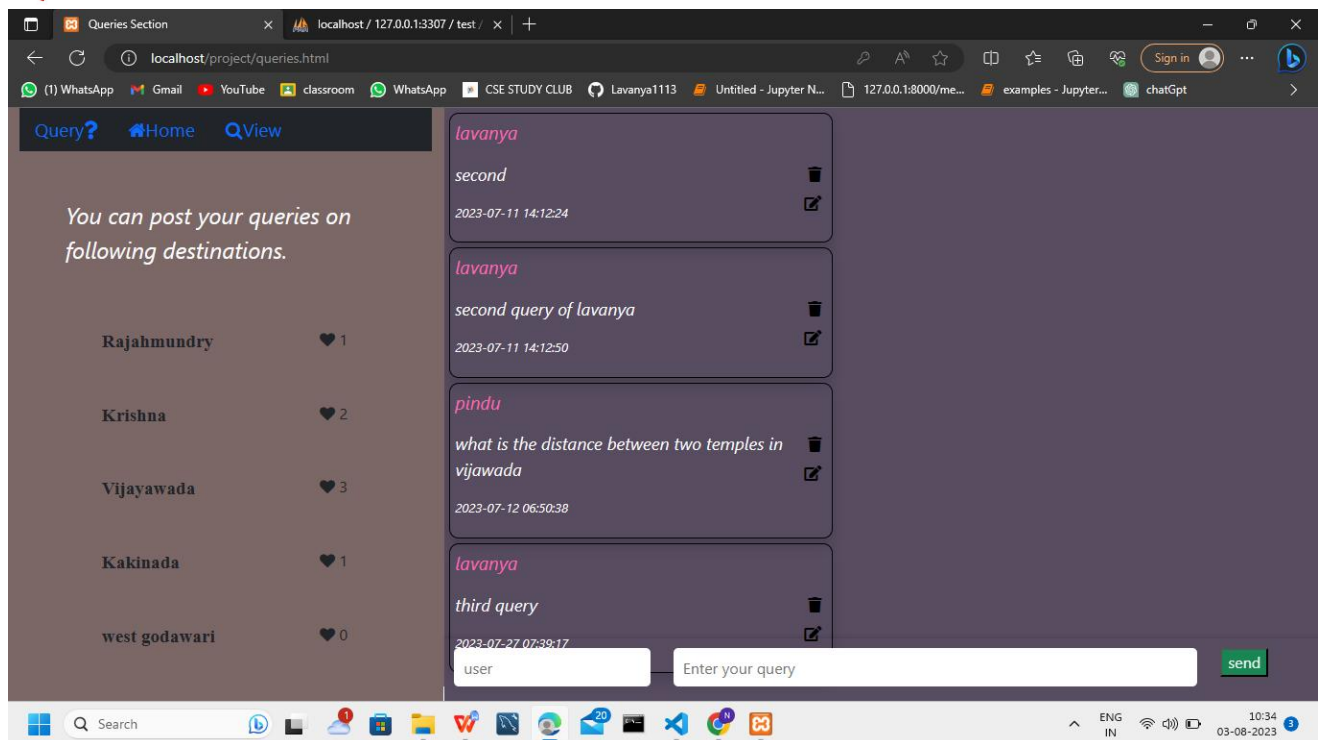

From drop-down menu we can navigate to the webpage.

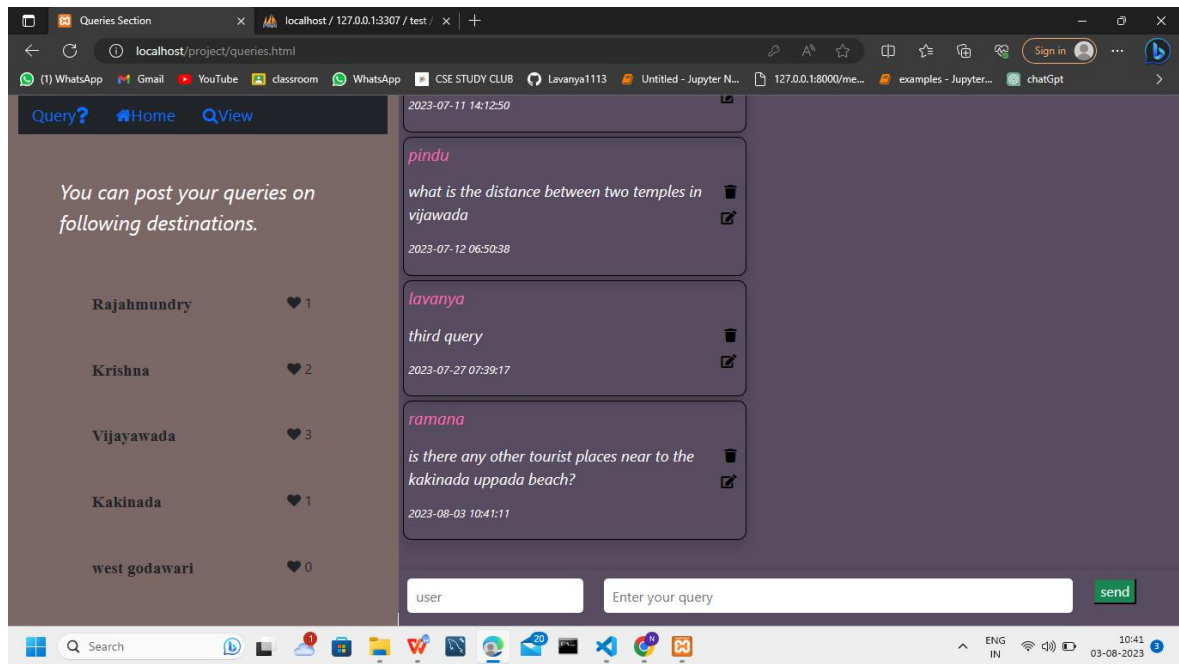

By searching in the navbar, can navigate to that particular section.

QUERIES.HTML

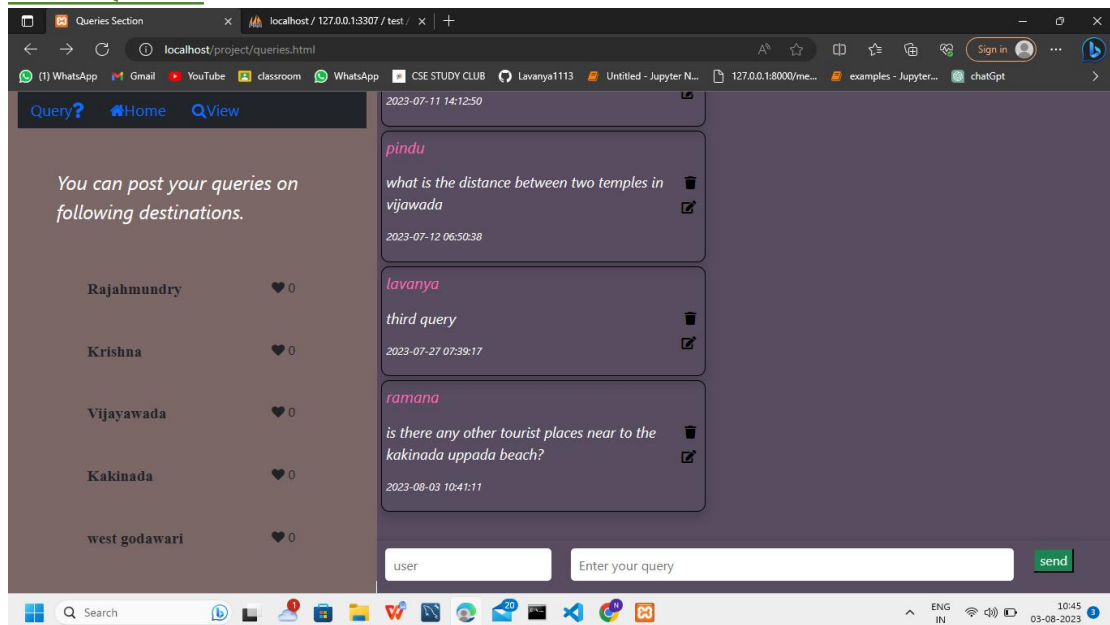

In The right side panel Valid user can post their query. If the user not present In the query the post in not posted in webpage. That is not stored in database.

Recently posted query will be added at bottom with time stamp and user name.

EDIT QUERY:

Modify user lavanya query with the valid password of her.
